测试账号信息：

```
APP_ID：bk7231-id
APP_SECRET：bk7231-PiWlHt_pCVgSBc_75ac-47RBnEE
username:zhangping@belon.cn    //登陆用户名
password:12345678              //登陆密码
```

Android编译方法与账号登陆问题：

- 下载最新版本（v5.8.00）的源码，下载方法：

```
git clone -b v5.8.00 https://support.sunseaiot.com/SunseaIoT/AMAP_iOS_Public.git

注意：源码一定要确保版本为：5.8.00
```

- 修改gradle_scripts目录下的编译脚本，如图：

- 依次执行如下命令，开始编译：

```
1, cd AMAP_Android_Public/gradle_scripts
2, ../gradlew -q execTasks
```

- 编译成功后，就需要在源码里面修改appid、appSecret，并选择区域为:CHINA,如图：

- 由于产品需要出口到海外，需要修改服务器的域名，修改方法如图：

- 打包成功后，即可用上面的账号进行登陆；

iOS编译方法与账号登陆问题：

- 下载最新版本（v5.8.00）的源码，下载方法：

```
git clone -b v5.8.00 https://support.sunseaiot.com/SunseaIoT/AMAP_iOS_Public.git
注意：一定要保证代码的版本
```

- 打开Podfile文件，修改下载Framework的地址，如图：

- 执行 pod install 安装第三方依赖的Fraemwork
- 安装完第三方依赖以后，如果AMAP$Core$Framework提示头文件找不到，我们需要
  AMAP$Core$Framework.xcconfig文件中的HEADER$SEARCH$PATHS：
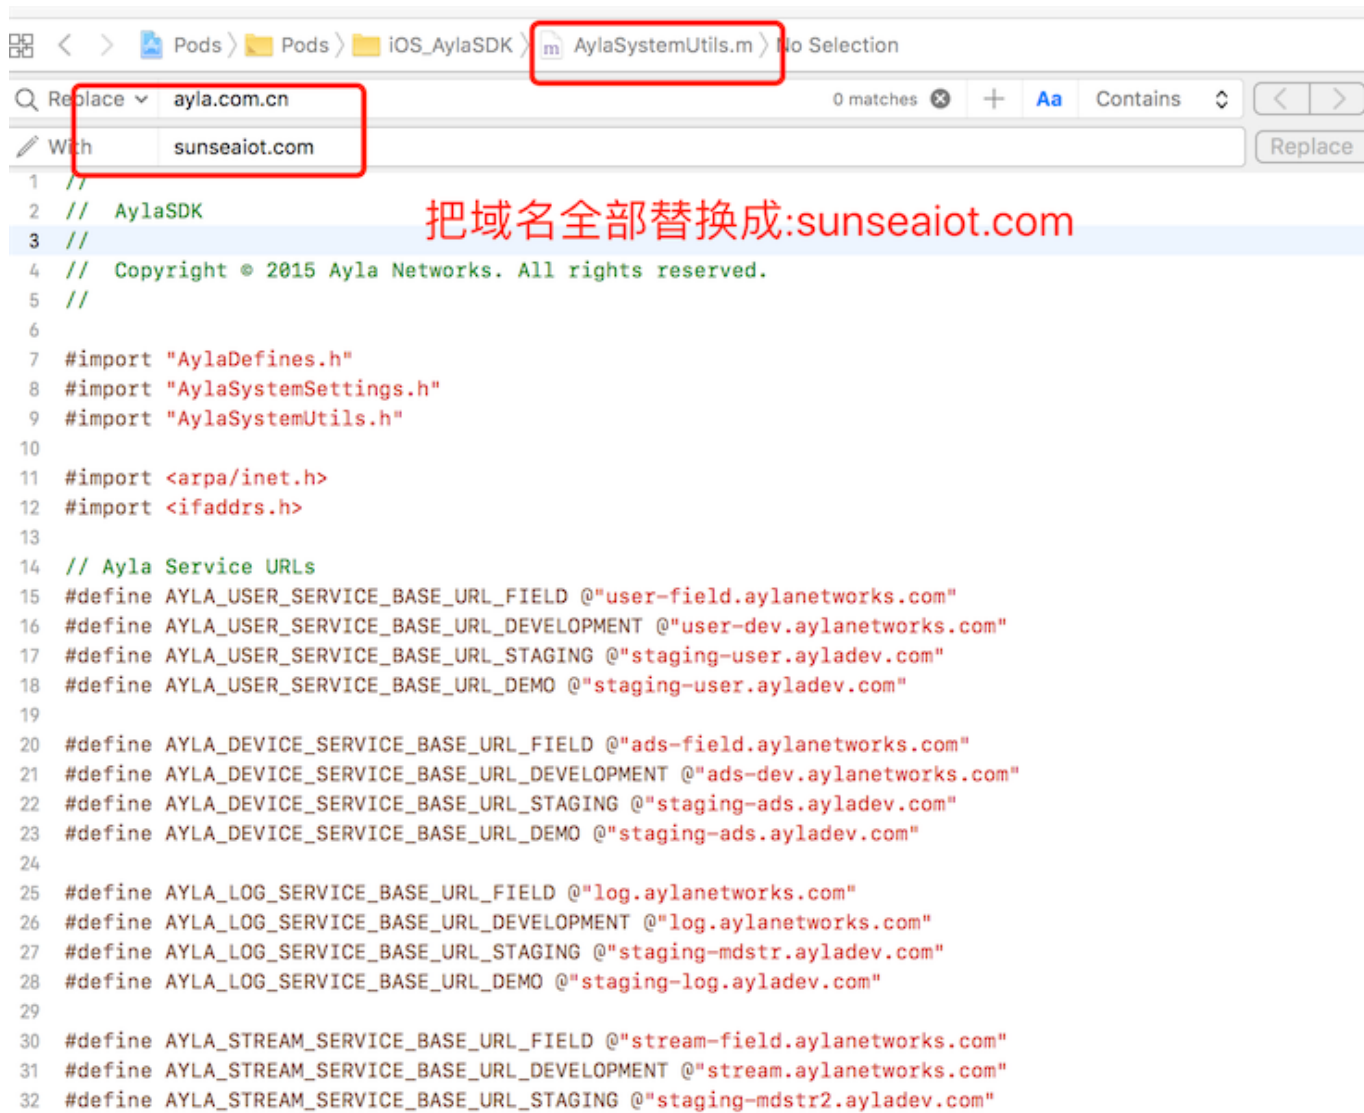

,修改后完整的文件内容如下：

```
CONFIGURATION_BUILD_DIR = ${PODS_CONFIGURATION_BUILD_DIR}/AMAP_Core_Framework
GCC_PREPROCESSOR_DEFINITIONS = $(inherited) COCOAPODS=1
HEADER_SEARCH_PATHS = "${PODS_ROOT}/Headers/Private" "${PODS_ROOT}/Headers/Private
/AMAP_Core_Framework" "${PODS_ROOT}/Headers/Public" "${PODS_ROOT}/Headers/Public/A
FNetworking" "${PODS_ROOT}/Headers/Public/AMAP_Core_Framework" "${PODS_ROOT}/Heade
rs/Public/AMSlideMenu" "${PODS_ROOT}/Headers/Public/CocoaAsyncSocket" "${PODS_ROOT
}/Headers/Public/CocoaHTTPServer" "${PODS_ROOT}/Headers/Public/CocoaLumberjack" "$
{PODS_ROOT}/Headers/Public/FirebaseAnalytics" "${PODS_ROOT}/Headers/Public/Firebas
eCore" "${PODS_ROOT}/Headers/Public/FirebaseInstanceID" "${PODS_ROOT}/Headers/Publ
ic/GTMOAuth2" "${PODS_ROOT}/Headers/Public/GTMSessionFetcher" "${PODS_ROOT}/Header
s/Public/Google" "${PODS_ROOT}/Headers/Public/GoogleMaps" "${PODS_ROOT}/Headers/Pu
blic/GooglePlaces" "${PODS_ROOT}/Headers/Public/GoogleSignIn" "${PODS_ROOT}/Header
s/Public/GoogleToolboxForMac" "${PODS_ROOT}/Headers/Public/HexColors" "${PODS_ROOT
}/Headers/Public/OCHamcrest" "${PODS_ROOT}/Headers/Public/OCMockito" "${PODS_ROOT}
/Headers/Public/PDKeychainBindingsController" "${PODS_ROOT}/Headers/Public/QNNetDi
ag" "${PODS_ROOT}/Headers/Public/SAMKeychain" "${PODS_ROOT}/Headers/Public/SocketR
ocket" "${PODS_ROOT}/Headers/Public/TSMessages" "${PODS_ROOT}/Headers/Public/iOS_A
ylaSDK" "${PODS_ROOT}/Headers/Public/libPhoneNumber-iOS"
PODS_BUILD_DIR = ${BUILD_DIR}
PODS_CONFIGURATION_BUILD_DIR = ${PODS_BUILD_DIR}/$(CONFIGURATION)$(EFFECTIVE_PLATF
ORM_NAME)
PODS_ROOT = ${SRCROOT}
PODS_TARGET_SRCROOT = ${PODS_ROOT}/AMAP_Core_Framework
PRODUCT_BUNDLE_IDENTIFIER = org.cocoapods.${PRODUCT_NAME:rfc1034identifier}
SKIP_INSTALL = YES
```

- 打开AylaSystemUtils文件，进行域名替换：

```
1   //
2   //  AylaSDK
3   //
4   //  Copyright © 2015 Ayla Networks. All rights reserved.
5   //
6
7   #import "AylaDefines.h"
8   #import "AylaSystemSettings.h"
9   #import "AylaSystemUtils.h"
10
11  #import <arpa/inet.h>
12  #import <ifaddrs.h>
13
14  // Ayla Service URLs
15  #define AYLA_USER_SERVICE_BASE_URL_FIELD @"user-field.aylanetworks.com"
16  #define AYLA_USER_SERVICE_BASE_URL_DEVELOPMENT @"user-dev.aylanetworks.com"
17  #define AYLA_USER_SERVICE_BASE_URL_STAGING @"staging-user.ayladev.com"
18  #define AYLA_USER_SERVICE_BASE_URL_DEMO @"staging-user.ayladev.com"
19
20  #define AYLA_DEVICE_SERVICE_BASE_URL_FIELD @"ads-field.aylanetworks.com"
21  #define AYLA_DEVICE_SERVICE_BASE_URL_DEVELOPMENT @"ads-dev.aylanetworks.com"
22  #define AYLA_DEVICE_SERVICE_BASE_URL_STAGING @"staging-ads.ayladev.com"
23  #define AYLA_DEVICE_SERVICE_BASE_URL_DEMO @"staging-ads.ayladev.com"
24
25  #define AYLA_LOG_SERVICE_BASE_URL_FIELD @"log.aylanetworks.com"
26  #define AYLA_LOG_SERVICE_BASE_URL_DEVELOPMENT @"log.aylanetworks.com"
27  #define AYLA_LOG_SERVICE_BASE_URL_STAGING @"staging-mdstr.ayladev.com"
28  #define AYLA_LOG_SERVICE_BASE_URL_DEMO @"staging-log.ayladev.com"
29
30  #define AYLA_STREAM_SERVICE_BASE_URL_FIELD @"stream-field.aylanetworks.com"
31  #define AYLA_STREAM_SERVICE_BASE_URL_DEVELOPMENT @"stream.aylanetworks.com"
32  #define AYLA_STREAM_SERVICE_BASE_URL_STAGING @"staging-mdstr2.ayladev.com"
```
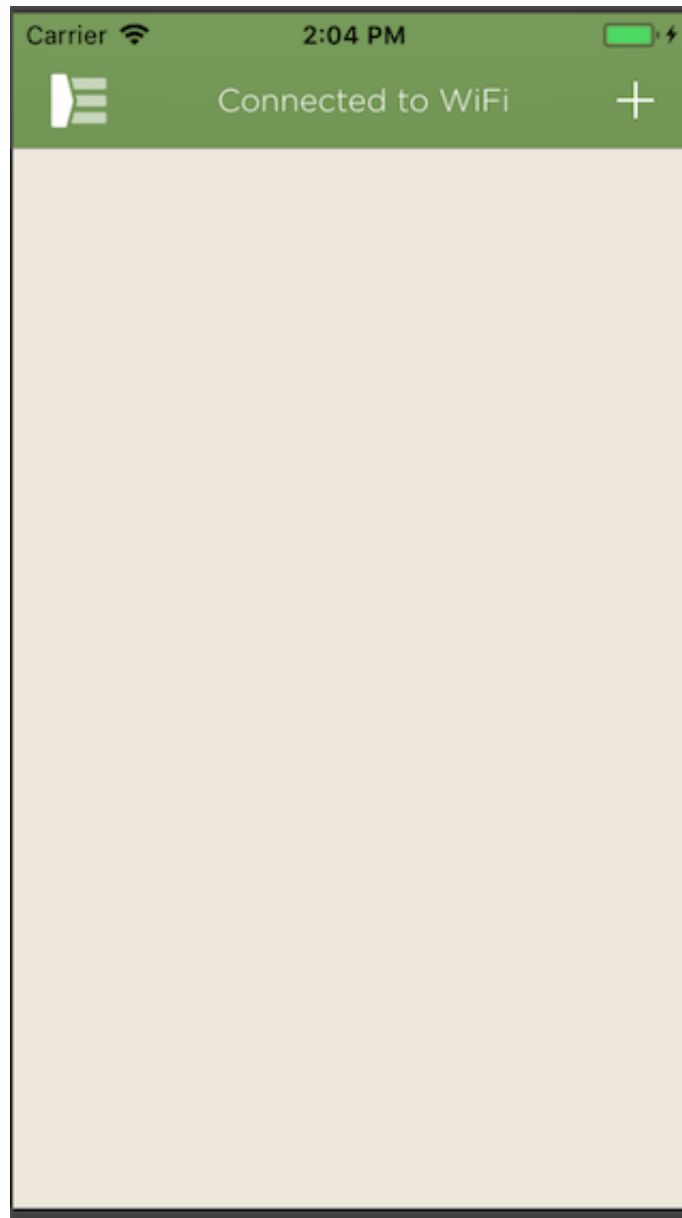

- 修改appid与appSecret，修改方法如图：

```objc
71
72   - (void)initializeSessionIsBackground:(BOOL)isBackgroundMode
73   {
74       [self initializeSessionWithService:AylaServiceTypeDevelopment country:@"CN" logging:YES
             isInBackgroundMode:isBackgroundMode];
75   }
76
77   - (void)initializeSessionWithService:(NSInteger)service country:(NSString *)country logging:(BOOL)logging
         isInBackgroundMode:(BOOL)isBackgroundMode
78   {
79       ALSessionParameters *sessionParameters = [[ALSessionParameters alloc] init];
80
81   #if DEBUG == 1
82       if (service == AylaServiceTypeStaging) {
83           sessionParameters.appId = @"AgileLinkDev-id";
84           sessionParameters.appSecret = @"AgileLinkDev-3432071";
85       }
86       else {
87           if ([country isEqualToString:@"EU"]) {
88               sessionParameters.serviceLocation = AylaServiceLocationEU;
89               sessionParameters.appId = @"AMAP-Dev-0dfc7900-eu-id";
90               sessionParameters.appSecret = @"AMAP-Dev-0dfc7900-eu-0o5UQkXOqav62BvEwUo2b5pTCuk";
91           }
92           else {
93               if ([country isEqualToString:@"CN"]) {
94                   sessionParameters.serviceLocation = AylaServiceLocationCN;
95               }
96               sessionParameters.appId = @"bk7231-id";
97               sessionParameters.appSecret = @"bk7231-PiWlHt_pCVgSBc_75ac-47RBnEE";
98           }
99       }
100  #else
101      if (service == AylaServiceTypeStaging) {
102          sessionParameters.appId = @"AgileLinkProd-id";
103          sessionParameters.appSecret = @"AgileLinkProd-1530606";
104      }
105      else {
106          if ([country isEqualToString:@"EU"]) {
107              sessionParameters.serviceLocation = AylaServiceLocationEU;
108              sessionParameters.appId = @"AMAP-0dfc7900-eu-id";
109              sessionParameters.appSecret = @"AMAP-0dfc7900-eu-SuZ8Psk6JQ1b94ckJ96Sx-t_L9E";
110          }
111          else {
```

这里要改成CN

这里要改成我们自己的appid和appSecret

- 运行登陆，登陆成功后如图：
